

EventHandler

What

- › 'EventHandler' is a pre-defined delegate type, which has two parameters called "object sender" and "EventArgs e"; and no return.

Parameters

- › **object sender**: Represents the source object, where the event is originally raised.
- › **EventArgs e**: Represents additional parameters to pass to 'event handler method'. It is recommended to create a child class for 'EventArgs' class.

How

Creating Event Based on EventHandler

```
public event EventHandler EventName;
```
